		N
11	**B**	At 0 °C, internal energy of ideal gas $U = \frac{3}{2}NkT = \frac{3}{2}NK\left(0+273\right)$ $= \frac{3}{2}NK(273)$ At 273 °C, internal energy of ideal gas $U' = \frac{3}{2}NkT = \frac{3}{2}NK\left(273+273\right)$ $= 2\times\frac{3}{2}NK(273)$ $= 2U$
12	**C**	For solids P and Q of the same masses m, heated at the same rate P
