		Therefore terminal potential difference increases.
23	**B**	Option A: Total resistance $= R$ Option B: Total resistance $= \dfrac{R(2R)}{R + 2R} = \dfrac{2}{3}R$ Option C: Total resistance $= R + \dfrac{R}{2} + R = \dfrac{5}{2}R$ Option D: Total resistance $= \dfrac{2R(2R)}{2R + 2R} = R$
24	**B**	$(4.0 \times 10^{-8})(10)$
