		$\Sigma V_s = \Sigma V_{w+s} + \Sigma V_w$
3	**C**	Option A: acceleration is rate of change of velocity which is a vector quantity (with direction). Option B: displacement is distance from origin in a specified direction which is a vector quantity (with direction). Option C: speed is rate of change of distance which is a scalar quantity (without direction) Option D: velocity is rate of change of displacement which is a vector quantity (with direction).
4	**D**	Using $v^2 = u^2 + 2as$
