Answer C

40) Every decay that result in α emission, proton number decrease by 2, neutron decrease by 2. Nucleon number drop by 4.
Every decay that result in β emission, proton number increase by 1, neutron decrease by 1. Nucleon number remains the same.
For nuclide Q, α β β emission will result in proton number ending up the same.
For nuclide R, β β β emission will result in the nucleon number unchanged.
Answer D
