		Current in the top branch remains unchanged.
20	**A**	For X, $R = \dfrac{\rho L}{A} = \dfrac{\rho L}{\frac{\pi}{4}d^2} = \dfrac{\rho(0.800)}{\frac{\pi}{4}(2.0)^2} = 0.2\dfrac{4\rho}{\pi}$ Option A will give the same resistance.
21	**B**	Consider a power supply of e.m.f. E and internal resistance r connected
