Answer A

30) flux density = (magnetic flux) / area

Maximum magnetic flux = flux density x area = $2.1 \times 10^{-4} \times 7.0 \times 10^{-5}$

$= 1.47 \times 10^{-8}$ Wb

Flux linkage = N x magnetic flux = $14.7 \times 10^{-9} \times 35 = 5.145 \times 10^{-7}$ Wb.

Answer B

31) Only for option A and B is there a flux passing through the area of the coil. This is where the orientation of the coil such that the flat surface area is perpendicular to the
