

- 5 An induced nuclear fission reaction may be represented by the equation

The variation with nucleon number  $A$  of the binding energy per nucleon  $B_E$  is illustrated in Fig. 5.1.

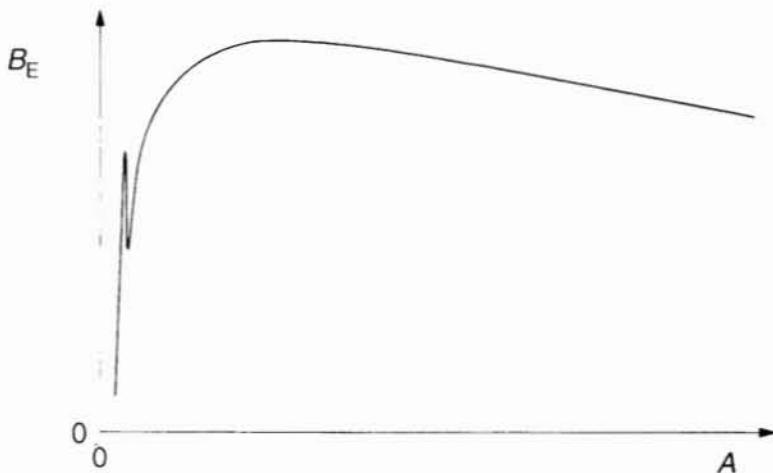

Fig. 5.1

- (a) State an approximate value, in MeV, for the maximum binding energy per nucleon.

$$\text{binding energy per nucleon} = \dots \text{MeV} [1]$$

- (b) On Fig. 5.1, mark approximate positions for the nuclei of

(i) uranium-235 (label the position U), [1]

(ii) barium-141 (label the position Ba), [1]

(iii) krypton-92 (label the position Kr). [1]

- (c) By reference to binding energy per nucleon, explain why energy is released in this fission reaction.
