

Answer: D

40 Proton number of Y = 93

Emissions can be: alpha, alpha,	proton number = $4+93 \Rightarrow S$
beta, beta	proton number = $-2+93 \Rightarrow P$
alpha, beta	proton number = $1+93 \Rightarrow R$

Nucleon number of Y = 228

Nucleon number of S = 236 Hence S possible as 2 alpha emissions need $228 + 4$

Nucleon number of P = 228 Hence P is possible since 2 beta emission needs 228

Nucleon number of R = 232 Hence R is possible since 1 alpha and 1 beta needs 232

Answer: C
