

Answer B

- 20) Sound waves are longitudinal. The powder heaps represents the positions of nodes (minimal vibrations). The distance between 4 consecutive heaps is 20 cm. The distance between two consecutive nodes is half a wavelength, hence wavelength is 10 cm. $f = v/\lambda = 330/0.1 = 3300$ Hz.

Answer A

- 21) Solving this problem by eliminating the inappropriate answers. Answer A (having two
