

Answer A

- 21) Solving this problem by eliminating the inappropriate answers. Answer A (having two wavelengths would result in two sets of first order maxima. Answer C would result in greater maxima separation (but still same angle). Answer D would result in several first order maxima being formed, overlapping one another resulting in a 'blurry' maxima.

Answer B

- 22) At point B, there is destructive interference. When amplitude of S_2 is reduced, the
