

acceleration. Thus B is correct, while C is wrong because they have different masses.

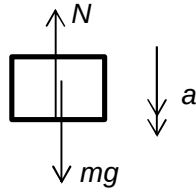

**12. Answer: B**

$$mg - N = ma_c = m \frac{v^2}{r}$$

For the car to remain in contact with the road,  $N > 0$  must be true.

$$mg > m \frac{v^2}{r}$$

$$\therefore r > \frac{v^2}{g} = \frac{20^2}{9.81} = 41 \text{ m}$$

**13. Answer: B**
