

numbers of 8 and 6 respectively.

40. Answer: C

$$\Delta E = \Delta mc^2$$

$$2.13 \times 10^{-13} = \Delta m (3 \times 10^8)^2$$

$$\Delta m = 2.37 \times 10^{-30} \text{ kg}$$

$$= 0.00143u$$

$$\begin{aligned} \text{Thus, mass at excited stage} &= 59.9308u + 0.0014u \\ &= 59.9322u \end{aligned}$$
