

spheres cannot be at rest at the same time.

6. Answer: C

Consider wagons 3 to 6 as one rigid body.

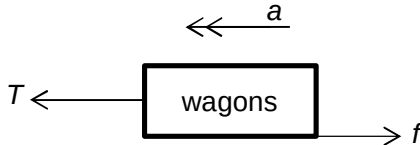

$$f = 4 \times 4000 = 16000 \text{ N}$$

By Newton's second law of motion,

$$F_{net} = ma$$

$$T - f = 4(6.0 \times 10^4)(0.15)$$

$$T = 52000 \text{ N}$$

7. Answer: C
