

$$\mathbf{33} \quad I_{rms} = \frac{V_{rms}}{R} = \frac{\frac{V_o}{\sqrt{2}}}{R} = \frac{V_o}{\sqrt{2}(R)}$$

$$I'_{rms} = \frac{2V_o}{\sqrt{2}(R)} = 2I_{rms}$$

$$\langle P \rangle = (I'_{rms})^2 R = (2I_{rms})^2 R = 4I_{rms}^2 R$$

Answer: B

$$(I_{rms})^2 = (5.0)^2$$
