

Answer: B

20 At sea level, T is approximately 300 K.

Kinetic energy of a molecule $E_k = \frac{3}{2}kT = \frac{3}{2}(1.38 \times 10^{-23})(300) = 6.21 \times 10^{-21} \text{ J}$

Answer: D

21 Taking that the intensity of the polarised light after the first filter is I
