

Answer: B

- 2** Since green is in the middle of the visible light spectrum, the wavelength of green light is roughly $\frac{400 + 700}{2} = 550 \text{ nm}$.

$$E = \frac{hc}{\lambda} = \frac{(6.63 \times 10^{-34})(3.0 \times 10^8)}{550 \times 10^{-9}} \approx 3.6 \times 10^{-19} \text{ J}$$

Answer: C
