

Answer: D

- 8 When submerged in the water,

$$U + F = W$$

$$F = W - U$$

$$= (3.00 \times 4.00 \times 5.00)(2300)(9.81) - (3.00 \times 4.00 \times 5.00)(1020)(9.81)$$

$$= 7.53 \times 10^5 \text{ N}$$

When it is clear of the water,

$$F' = W = (3.00 \times 4.00 \times 5.00)(2300)(9.81) = 1.35 \times 10^6 \text{ N}$$

Answer: D

- 9 The skier has to be in equilibrium. Therefore, the lines of action of the gravitational force
