

		Heat transferred from gas to surroundings = $W - \Delta U$
16	B	Using $a \propto -x$ and $F = ma \Rightarrow F \propto -x$,

No.	Answer	Solution
		When the displacement is zero, the restoring force is zero and the speed is the highest at the lowest position of the pendulum.
17	B	$T_1 = \frac{1}{120.0} \text{ s}$, the number of cycles in 0.25 s = $\frac{0.25}{\frac{1}{120.0}} = 120.0$
