

		=120 mm
19	D	Using $d\sin\theta=n\lambda$, $\left(\frac{0.01}{4.0\times 10^3}\right)\sin\theta=3\left(\frac{3\times 10^8}{6.0\times 10^{14}}\right)\Rightarrow \theta = 36.9^\circ$ $\therefore \text{angle} = 2\times 36.9^\circ \approx 74^\circ$
20	C	Using $\sin\theta=\frac{\lambda}{d}$
