

		To reduce θ , $\lambda \downarrow$ and $b \uparrow$
21	B	$v = at$ $v = \frac{F}{m}t$ $v = \frac{qE}{m}t$ Since $\frac{qE}{m}$ is constant, v is directly proportional to t.
22	B	$E = \frac{V}{d} = \frac{1000}{0.01} = 100000 \text{ V m}^{-1}$
