

		Since m is constant, v is directly proportional to t .
22	B	$E = \frac{V}{d} = \frac{1000}{0.10} = 10000 \text{ V m}^{-1}$ With respect to lower plate, $V_x = (10000)(0.080) = 800 \text{ V}$ $V_y = (10000)(0.040) = 400 \text{ V}$ $V_{xy} = 800 - 400 = 400 \text{ V}$
