

16	D	$a = \frac{24 - 0}{10} = 2.4 \text{ m s}^{-2}$

No.	Answer	Solution
		$F_{driving} - (1000)(9.81)(\sin 10^\circ) = 1000(2.4)$ $P_{engine} = F_{driving} v = [(1000)(9.81)(\sin 10^\circ) + 1000(2.4)](24) = 98 \text{ kW}$
17	A	6.90
