

No.	Answer	Solution
1	B	Volume of the balloon, $V = \frac{4}{3}\pi r^3$ $\frac{\Delta V}{V} = 3 \frac{\Delta r}{r}$ This means the fractional uncertainty (and hence the percentage uncertainty) of volume is directly proportional to that of the radius.
2	D	In Newton's 2 nd law, the action and reaction force must be acting on different
