

		$= 765 \text{ N}$
9	D	Useful power output P_{out} $= 1600 \times 22$ $= 35200 \text{ W}$ Power output P_{in} $= \frac{3.3 \times 10^6}{60}$ $= 55000 \text{ W}$ Efficiency

No.	Answer	Solution
		$= \frac{35200}{55000} \times 100\%$ $= 64\%$
10	B	?
