

energy is incorrect.

3(a)

No.	Solution
3(b)	 The graph shows the electric field strength (y-axis) versus the distance from a positively charged plate (x-axis). The x-axis is marked with 0, x, $2x$, and $3x$. The y-axis is labeled 'electric field strength'. The electric field strength is constant at a high value for $0 \leq d < x$, drops to zero at $d = x$, remains at zero for $x \leq d < 2x$, and then jumps back to the same high constant value at $d = 2x$, remaining constant for $d \geq 2x$. The graph is plotted on a grid.
4(a)	Diffraction is the spreading of waves when they pass through a small opening or
