

		particle's initial direction of travel. Hence the path is parabolic.
28	B	During α- emission, the number of protons decreases by 2, and the nucleon number decreases by 4. During β- emission, the number of protons increases by 1, and the nucleon number stays the same. Hence the new nuclide has 91 protons and a proton number of 234.
29	A	${}^{239}_{94}\text{Pu} \rightarrow {}^{112}_{44}\text{Pd} + {}^{124}_{50}\text{Xe} + 2 {}^1_0\text{n}$
