

			resistance).
	7	A	According to examiners, this question creates the most confusion among students. Many without taking heed of the axes label assumed that it was a velocity-time graph and therefore conclude that the distance is the sum of 2 areas under the graph resulting in answer as C. If we add up the distance part by part, it should provide a total distance of 28 m and displacement of 0 m.
	8	A	Change in momentum =
