

		2
8	A	Time taken to travel 1000 m $t = \frac{1000}{20} = 50 \text{ s}$ Output power of car $P_o = Fv = 400 \times 20 = 8000 \text{ W}$ Input power by car $P_{\text{in}} = \frac{P_o}{0.16}$ Amount of fuel used

No.	Answer	Solution
		$\Delta m = \frac{\frac{8000}{0.16} \times 50}{48 \times 10^6}$ $= 0.05208$ $\approx 52 \text{ g}$
9	A	Angular velocity, $v = r\omega$
