

		$\approx 11.8 \text{ kN}$
20	C	Frequency of revolution, $f = n \text{ s}^{-1}$ Angular velocity of the object $\omega = \frac{2\pi}{T} = 2\pi f = 2 \times \pi \times n \text{ rad s}^{-1}$ Alternatively, can also use unit analysis. Option A: $[\pi \times n \times d] = \text{rad s}^{-1} \text{ m}$ Option B: $[\frac{2 \times \pi}{n}] = \frac{\text{rad}}{\text{s}^{-1}} = \text{rad s}$ Option C: $[2 \times \pi \times n] = \text{rad s}^{-1}$ Option D: $[\frac{\pi \times d}{n}] = \frac{\text{rad m}}{\text{s}^{-1}} = \text{rad m s}$
21	A	With an NTC thermistor, when the temperature increases, resistance
