

		exerts on X, being action-reaction pair.
27	B	Mass defect of an atom of helium $= 2 \times \text{mass of proton} + 2 \times \text{mass of neutron} +$ $2 \times \text{mass of electron} - \text{mass of Helium atom}$ $= 2(1.00728u + 1.00867u + 0.00055u) - 4.00370u$ $= 0.0293u$
28	D	Option A is correct: $238 - 94 = 144$ neutrons
