

		$\approx 2.5 \times 10^{-11} \text{ m}$
4	C	Using $s_y = u_y t + \frac{1}{2} a_y t^2$, taking downward as positive, $s_y = \frac{1}{2} (9.81) (3.00)^2$ $= 44.145$ $\approx 44.1 \text{ m}$ The vertical displacement is 44.1 m downward from projection point.
5	D	At the highest point in its trajectory, the ball has a downward acceleration of
