12	A	If the subtended angle θ is given in degrees, the formula for arc length, $s = \frac{\theta}{360} \times 2\pi r$ $\theta = \frac{360}{2\pi r} s$ If the subtended angle θ is given in radians, the formula for arc length,	

Qn	Answer	Solution
		$s = r\theta$ $\theta = \frac{s}{r}$
13	B	When the mass of the satellite is m and the mass of the planet is M , the
