

| Qn | Answer | Solution                                                                                                                                                                                                                  |
|----|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 6  | C      | In an inelastic collision between two isolated objects, the total momentum and total energy of the objects are conserved. However, there is loss in kinetic energy of the objects, hence kinetic energy is not conserved. |
| 7  | D      | Using conservation of energy                                                                                                                                                                                              |
