

		Unit of magnetic flux ($\phi = BA$) is tesla metre
27	D	Options A and C: Not possible, because the circuit is connected to d.c. cell. Option B: Not possible, because the two diodes will block the flow of current in either direction of the circuit, resulting in no p.d. across the load resistor. Option D: Correct, the diodes will allow current flow in the clockwise direction, but not the anti-clockwise direction, resulting in a half-wave rectified p.d. across the load resistor.
28	A	Energy of emitted photon
