

		In half a year, the angular displacement of the Earth is π rad.
8	B	Gravitational force, $F = \frac{GMm}{r^2}$ Gravitational force exerted per unit mass, $\frac{F}{m} = \frac{GM}{r^2}$ $g = \frac{GM}{r^2}$ which is gravitational field strength.
9	C	Options A and D: Spacecraft could be in free fall after their rockets have
