

		$\vec{P}$ on $Q = -\vec{R}$ on Q and thus net force on Q is zero.
25	B	Using Fleming's Left-Hand Rule, the current due to the negatively charged particle is S-W and thus its velocity is pointing N-E. Thus, the current due to the positively charged particle is in the N-E direction. Applying Fleming's left-hand rule, the force is in the S-E direction.
26	D	5. Draw
