

		Applying Fleming's left-hand rule, the force is in the S-E direction.
26	D	$F = Bqv$ $= (3.0 \times 10^{-5}) (1.6 \times 10^{-19}) (1.5 \times 10^7)$ $= 7.2 \times 10^{-17} \text{ N}$ The path of the electron is on the plane of the paper while the magnetic field is into the page and thus, they are perpendicular to each other.
27	C	Please refer to notes
