

		direction.
24	B	Magnetic force provides the centripetal force required for the particle to move in circular path. $\Rightarrow Bqv = \frac{mv^2}{r}$ $\Rightarrow Bq = \frac{mv}{r} = \frac{mr\omega}{r} = m\frac{2\pi}{T}$ $\Rightarrow T = \frac{2\pi m}{Bq}$ Hence T is independent of r.
25	D	Magnitude of magnetic flux cut by aircraft
