

26

B

Change in peak voltage from $\frac{1}{4}T$ to $\frac{3}{4}T = -V_0 - V_0 = -2V_0$

Hence fraction of a cycle when magnitude change is $2V_0$ is $\frac{T}{2}$

27

A

Total resistance in the cable $= 0.030 \times 100 \times 2 = 6 \Omega$
