

		From t_1 to t_2 , gradient of v - t graph is constant and negative
3	C	Using $s_y = u_y t + \frac{1}{2} a_y t^2$ $0 = (15 \sin 40^\circ) t + \frac{1}{2} (1.62) t^2$ $t = 11.9 \text{ s}$
4	B	The forces F_x and F_y act on the cylinder in a direction perpendicular to the
