

		Net work done on the specimen is area of RS.
7	C	Let the force provided by the engine be F. $F - 600 - 900 \times 9.81 \times \sin 10^\circ = 0$ $F = 2133 \text{ N}$ Hence power developed by the engine = Fv $= 2133 \times 16$ $= 34 \times 10^3 \text{ W}$
8	D	Work done on gas = Area under $p-V$ graph
