

No.	Solution
1(a)	
1(b)	 Fig. 1.2 For particle P, circular motion in a magnetic field, $r = \frac{mv}{Bq}$ For particle S, circular motion in a magnetic field, $r_s = \frac{m(2v)}{Bq} = 2r$ Note: The path MUST start bending once it is in the magnetic field, but the bend is very gentle.
